- Ice-free port with minimal tides and no currents.
- Deep water, 45-50 feet at berth, allows maximum utilization of vessel capacity.
- Two modern and efficient container terminals with seven modern gantry cranes. Depth at container berths ranges from 45' to 50', easily accommodating the largest container ships.
- Halifax is one day closer to southeast Asia (via Suez) than any other North American east coast container port.
- First inbound port and last outbound port on the North American Continent, enabling shortest ocean voyage for ships operating on the North Atlantic and on Round-the-World and Suez routings. Strategically located in close proximity to major shipping lanes.
- On dock double-stack rail service offering daily departures to and from Montreal and Toronto, and the U.S. midwest.
- Advanced and comprehensive EDI system.
- Excellent intermodal connections to all inland points in Canada and the U.S. by rail, truck, water, and air.
- Excellent landbridge opportunities to the U.S. and Canadian west coast.

Photo of Halifax International Container Terminal

The Port of Halifax has two container terminals which are equipped for direct loading to ship, truck, or rail for containerized, roll-on roll-off, breakbulk, and heavy-lift cargoes. Photo of Fairview Cove Container Terminal

Advantage Halifax

- Served by over 20 direct liner services.
- Weekly feeder services to Newfoundland, St. Pierre and Miquelon, and New England. Halifax is an ideal "hub" for feeder cargo to U.S. ports.
- Skilled, stable, efficient workforce.
- High labour productivity; average productivity, at 25 container lifts per hour, is 20% greater than some competing U.S. ports.
- Large volume of locally based reefer traffic for export.
- Internationally competitive bunker fuel prices.
- No Harbour Maintenance Tax, representing \$ savings to U.S. shippers.
- No cabotage restrictions (i.e. "Jones Act") for transshipment to U.S. destinations.

Ocean Terminals is the centre of breakbulk activity at the Port of Halifax, offering 13 berths and over 400,000 square feet of covered storage, including a new state-of-the-art forest products facility.

DIRECTORY INFORMATION

This directory has been designed to show in graphic form the ocean shipping services available between the Port of Halifax and various world ports. Its purpose is to assist regional exporters in locating the services best suited to their needs and to promote the use of Halifax as the gateway to world trade routes.

DIRECTORY COVERAGE

The services in this directory include mainly container vessels, ro/ro vessels, or a combination of both, as well as general cargo vessels which provide a regular, year round, direct liner service to and from the Port of Halifax. Included also, starting on page 51, are additional liner services provided through the use of feeder services from/to Halifax. Types of container equipment, frequency of sailings, transit times and other service characteristics are identified as footnotes to each service listed in the directory. The directory also identifies whether or not the carrier's service is operated as "conference" or "non-conference" (a conference is defined in the Shipping Conferences Exemption Act, 1987, to mean "... an association of ocean carriers that has the purpose or effect of regulating rates and conditions for the transportation by those ocean carriers of goods by water").

It should also be noted that numerous other ocean shipping lines, tramp operators, charter vessels and private vessels serve the Port of Halifax on an inducement or occasional basis, a seasonal basis, or specialty cargo basis. Many of these offer service opportunities at reduced rates to Atlantic Provinces' exporters and importers.

DESCRIPTION OF CONTAINER SERVICES (METHODS)

To the extent that the equipment can be made available, container lines provide suitable containers for the traffic offered for carriage. For the most part, the lines offer a full containerload service on a house-to-house basis whereby the container is stuffed by the shipper and stripped by the consignee. Where the line is required to stuff the container (pier-to-house) or strip the container (house-to-pier) or both (pier-to-pier) additional charges apply.

SUBSTITUTE SERVICE CANADA

Containerized cargo is generally transported at carrier's expense between Atlantic ports and Montreal.

OTHER EXPLANATIONS (Format, Terminology, Etc.)

.....	→	Main route - ports served by direct call.
.....	—	Feeder service - ports served through connecting services, either by vessel or overland transport.
Ro/Ro	—	Means roll-on/roll-off to or from vessel on wheeled vehicles or for various types of cargo placed on trailers or mafi trailers.
Service Patterns/Transit Times	—	In all cases the graphics show <u>normal</u> service patterns and transit times, which can be affected by fortuitous events.
Ports and Points Named	—	Because of the limitations of space, it is not possible to name all of the ports and points that are reached by feeder service and by inland transportation in conjunction with the ocean services set out in this directory. Accordingly, the points named herein should be considered only as a guide of the major points served.
Errors/Omissions/Changes	—	While every effort has been made to ensure the accuracy of the information contained herein, the APTC cannot, and does not accept any liability for errors or omissions nor does it assume any responsibility for notification of subsequent changes or revisions.
